

ULTIMA DICOM Worklist

A powerful DICOM Worklist and a must-have in every facility

The Ultima DICOM Worklist provides a list of imaging procedures that have been scheduled for the day by a modality. It retrieves all patient information from the RIS and HIS. All patient information will be entered once and then automatically transmitted throughout the workflow. By using the Ultima DICOM Worklist, you can accelerate the imaging workflow and avoid typing errors.

Key Features

- Provides a list of imaging procedures that have been scheduled for the day by a modality
- Retrieves all patient information from the RIS and HIS
- Can be connected to unlimited modalities
- Contains patients and exams data and schedules
- Communicates in both HL7 and DICOM
- Assure the connection between HIS/RIS and PACS
